

RetroFit

Restoration programme for RUFF toroidal winding machines

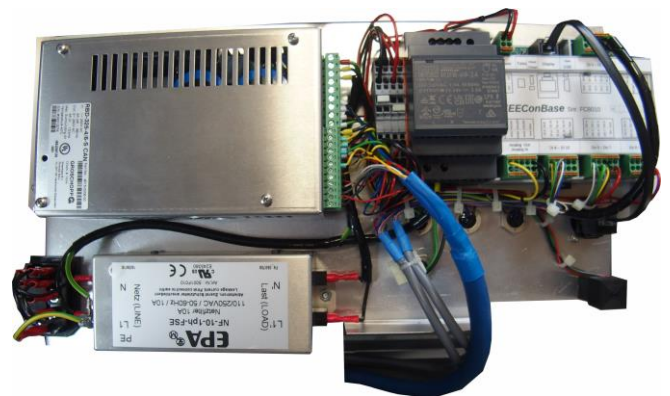

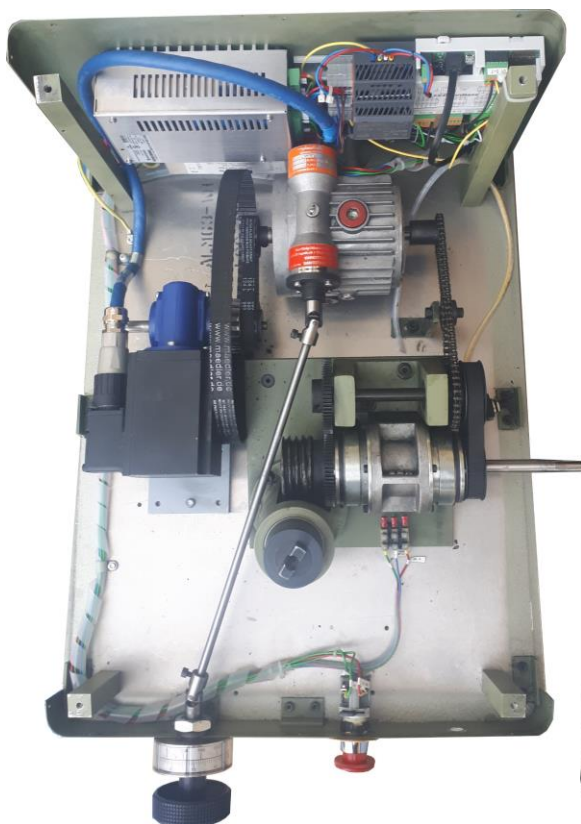

Very easy to replace. All components are pre-assembled on a plate.

No wires need to be disconnected for installation.

The Credo-tech RetroFit control includes all winding functions for the entire series of RUFF winding heads (slider, gear rack, belt, taping)

- Servo-motor-gearbox combination. Maintenance-free
- Servo-controller with all connecting cables
- FEEConESP control unit mounted on a cap rail and input device with joystick switch.
- Connection for 2 separate winding count sensors. This ensures a 100% accurate number of turns.
- Connection for tape cutter 24V
- Foot speed regulator
- Further I/O are possible e.g. to switch additional 24V clutches.
- Program memory on SD card.

Many other possibilities are given. E.g. controllable and adjustable wire pull from the magazine with soft motor start.

Pre-assembled RetroFit set
